Abstract

The idea of insurance is based on cooperation between members of the same society to bear the harm that befalls one of them and to distribute it over the whole.

As for the insurance mechanism, it is carried out by insurance companies or their complements by reinsurance companies, which organize the process by collecting premiums after determining them from each according to the chances and quantity of what is expected to be incurred in damage as a result of the realization of the insured risk.

And then redistributing it to those who were harmed from the total insured them according to the terms and conditions of the insurance contract.

We learned that there are many operations that they have to do manually, it takes a lot of time and causes many errors .

As a result of this, sometimes a lot of problems happen and they face many conflicts with customers.

To solve the above problem, continue to keep insurance records, seat availability for customers, insurance price, order creation, customer registration and other things, we introduce this insurance system proposal.

By using this program, we can secure from any customer in an easy and simple way.

This project provides all of the above in an effective and correct way.

الملخص

تستند لفكرة التأمين الى التعاون بين افراد المجتمع الواحد على تحمل الضرر الذي يصيب احدهم و توزيعه على مجموع .

واما عن الية التأمين يتم بواسطة شركات التأمين او مكملاتها شركات اعادة التأمين , وهي التي تنظم العملية عن طريق تحصيل الاقساط بعد تحديدها من كل حسب فرص وكمية ما متوقع ان يصيبه من ضرر نتيجة لتحقق الخطر المؤمن منه .

ومن ثم اعاده توزيعها على من تضرر من مجموع المؤمن لهم وفقا لشروط و احكام عقد التأمين .

علمنا أن هناك العديد من العمليات التي يتعين عليهم القيام بها يدويًا، فهي تستغرق الكثير من الوقت وتتسبب في العديد من الأخطاء. نتيجة لهذا، في بعض الأحيان تحدث الكثير من المشاكل وكانوا يواجهون العديد من النزاعات مع العملاء.

لحل المشكلة المذكورة أعلاه، ومواصلة الاحتفاظ بسجلات التأمين ، وتوافر المقاعد للعملاء، وسعر التأمين، وإنشاء الطلبات ، تسجيل العملاء وأشياء أخرى، نقدم هذا الاقتراح الخاص بنظام التأمين.

باستخدام هذا البرنامج، يمكننا تأمين من أي عميل بشكل سهل و بسيط . يوفر هذا المشروع كل ما ذكر اعلاه بشكل فعال و بطريقة الصحيحة .

Chapter1

Introduction and Definition of the Project

1) Solve The Problem:

In light of the development witnessed by the world, each company has its own system .

And here lies the problem that we want to solve, which is to secure a system for insurance companies that is an alternative system for traditional papers and processes that take time and effort on the part of customers and employees.

A system that the client, employee and manager can deal with until the system is automated smoothly and completely and with the correct information.

2) Aim of the Project:

The project aims to provide a suitable management platform for the insurance company that has the availability, where the administrator and employees can deal with the system without being restricted by the factor of time and place.

It also has ease of use and flexibility, as it provides good and appropriate interactive interfaces for the customer and the person responsible for him. The interfaces are also presented in a coordinated and well-thought-out design .

3) Documentation Description:

- 3.1 **Project Study:** Defining project objectives and development method.
- 3.2 **Theoretical study of the project:** The project was studied in theory and then tried to drop it on the practical side of the project.
- 3.3 **Analytical and Design Study of the Project:** Include detailed description of the project components and how to analyses, design, investigate and test these components.

1) Project's Management:

- 4.1 **Human Recourse:** The working group include three students from Syrian Private University – Faculty of Computer and Informatics Engineering – Department of Software & Information System Engineering.

4.2 Programming Recourse:

4.2.1 Bootstrap5 (Front-End-Framework): It is the most famous and powerful libraries that combine HTML, CSS and JS to build pages and applications, and it is mainly useful for building compatible sites with different screen sizes and sizes, including, cell phones, and it is a public and open-source library for everyone on the site.

We have relied on this platform in our project because:

- 1) Great flexibility and ease of use.
- 2) Designed to be compatible with all devices.
- 3) Compatible with all browsers.
- 4) Offers a stable and reusable design.
- 5) It can be learned easily and quickly.
- 6) Great scalability using JavaScript.
- 7) It has support for jQuery.
- 8) Support for the JavaScript API.
- 9) Can be used in any editor or programming environment.

4.2.2 XAMPP Local Host:

The Project was implemented using the local server (Apache Web Server) and has the following features:

1. Free and open source: the program has been well received and has built its own large community of users and developers, and received the necessary updates as quickly as possible, making it an ideal choice for many.
2. XAMPP supports many programs and services in embedded form, including the following:
 - 2.1 X: Supports Multiple Platforms.
 - 2.2 A: Supports Apache HTTP Server.
 - 2.3 M: Supports MariaDB (formerly MySQL rules).
 - 2.4 P: Supports the Programming Language PHP.
 - 2.5 P: Supports the Programming Language Perl.
3. Multi-Platform: Supports (Windows, Linux, MacOS).
4. Easy to Install and Used: The program comes with all its contents within a single installation package, which makes it easy for the user to install and set it up automatically without the need to do any manual setup process.

4.3 Technologies Used :

4.3.1 HTML5:

HTML, or HyperText Markup Language, allows web users to create and structure sections, paragraphs, and links using elements, tags, and attributes. However, it's worth noting that HTML is not considered a programming language as it can't create dynamic functionality.

4.3.2 CSS:

Cascading Style Sheets, fondly referred to as CSS, is a simple design language intended to simplify the process of making web pages presentable. CSS handles the look and feel part of a web page. Using CSS, you can control the color of the text, the style of fonts, the spacing between paragraphs, how columns are sized and laid out, what background images or colors are used, layout designs, variations in display for different devices and screen sizes as well as a variety of other effects. CSS is easy to learn and understand but it provides powerful control over the presentation of an HTML document. Most commonly, CSS is combined with the markup languages HTML or XHTML.

4.3.3 JAVA SCRIPT:

JavaScript is a text-based programming language used both on the client-side and server-side that allows you to make web pages interactive.

Where HTML and CSS are languages that give structure and style to web pages, JavaScript gives web pages interactive elements that engage a user.

Common examples of JavaScript that you might use every day include the search box on Amazon, a news recap video embedded on the New York Times, or refreshing your Twitter feed.

Incorporating JavaScript improves the user experience of the web page by converting it from a static page into an interactive one. To recap, JavaScript adds behavior to web pages.

4.3.4 SMTP:

The SMTP for Gmail is a feature you can use to send emails through different email clients using Gmail address or domain.

It was used when the employee accepts the sign up request, after which an email is sent to the new client that his request has been accepted.

4.3.5 PHP:

PHP(short for Hypertext PreProcessor) is the most widely used open source and general-purpose server-side scripting language used mainly in web development to create dynamic websites and applications. It was developed in 1994 by Rasmus Lerdorf. A survey by W3Tech shows that almost 79% of the websites in their data are developed using PHP. It is not only used to build the web apps of many tech giants like Facebook but is also used to build many CMS (Content Management System) like WordPress, Drupal, Shopify, WooCommerce etc. PHP can actually do anything related to server-side scripting or more popularly known as the backend of a website. For example, PHP can receive data from forms, generate dynamic page content, can work with databases, create sessions, send and receive cookies, send emails etc. There are also many hash functions available in PHP to encrypt user's data that makes PHP secure and reliable to be used as a server-side scripting language. So, these are some of the abilities of PHP that makes it suitable to be used as server-side scripting language. You will get to know more of these abilities in further tutorials.

4.4 Major Task:

The project was done on The Spiral Model and include the next phases and tasks:

1. Planning:

It includes estimating cost, schedule, and resources for iteration, as well as understanding system requirements for ongoing communication between the system analyst and the client.

2. Risk Analysis:

Potential risks are identified during the planning and completion of the risk mitigation strategy.

3. Engineering:

It included writing code, testing, and software deployment on the client's site.

4. Evaluation:

Evaluation of the program by the client, which also includes identification and control of risks such as schedule for time slippage and cost overrun.

Chapter2

Theoretical Study

Introduction: Gone are the days when people had to stand in long queues at insurance companies just to fill out forms and sign up for insurance service. With technologies constantly improving, these services are now more convenient and faster. These electronic services are one of the most important elements of our modern world.

What is insurance system? What are the types of insurance system? Let us take a look at some of the most important things every modern consumer should know about insurance system.

1. What is Insurance System?

is a social system that aims to create a reserve to face the uncertain losses that individuals and institutions are exposed to by transferring the burden of risk from one person to several people or a group of people. That is, it is a system designed to reduce the uncertainty of financial losses by shifting the burden of risk.

2. Types of Insurance System:^[7]

In our project, we will have three types of insurance:

2.1 Medical Insurance: is obtaining insurance coverage for the costs of treating medical conditions that the insured may be exposed to, simply because if he bears the cost himself without insurance, he can reach to bear unexpected large sums or resort to advances to cover the costs of treatment (in case of exposure to diseases whose treatment is expensive).

2.2 Life Insurance: Life Insurance: Here the issue is a little different, because the person asks for insurance for his life for the benefit of the beneficiaries whose names are specified in the insurance policy, and the duration of the insurance remains for a certain period, for example, for the age of 65 or 70, and it does not differ if the death occurred due to an accident or a natural one.

2.3 Property Insurance: is one of the types of insurance that includes insurance on shops or private properties such as homes, offices and buildings, and the benefits of property insurance vary according to the type of things you want to insure.

2.4 Car Insurance: It is the insurance that provides you with protection in the event of a traffic accident that causes injury to a person or damages his property.

3. Benefits of Insurance System:[6]

The benefits of insurance are many, but we will present some of them according to the type of insurance included in our project:

3.1 Medical Insurance:

1. Cover basic medical expenses such as check-ups and medicines to get better health care.
2. Covering expenses against critical illnesses with high treatment costs.
3. It bears a significant portion of the cost of many medical examinations.
4. The benefits of medical insurance for women are numerous to include a large portion of the costs of childbirth.
5. Some types of medical insurance may cover all or part of the costs of plastic surgery, such as plastic surgery, obesity, and others.

3.2 Life Insurance:

1. Providing security and protection for your family to obtain an insurance amount in the event of death, total disability, or critical illness.
2. Monthly income of the husband / wife.
3. Annual security deposit for children in case of death only.

3.3 Property Insurance:

1. Insurance against theft and burglary.
2. Insurance against natural fires, electrical diamond fires, and others.
3. Protection from floods, torrential rains and earthquakes in some countries that are famous for being exposed to such types of natural disasters.

3.4 Car Insurance:

1. Protecting individuals from material losses in the event of any damage to the vehicle.
2. Compensation for the car owner in the event of injury to one of its occupants in a road accident.
3. Car insurance against any natural disasters such as floods, earthquakes, storms and fires.

In a Nutshell:

In the end, do not think of insurance premiums as an unnecessary monthly expense that increases your financial burden, but rather think of the various insurance benefits and choose the insurance that is appropriate for your future needs that can help you avoid unexpected expenses that were not taken into account in the future without affecting your basic savings .

4. Similar Systems:

4.1 Arope Syria System:[8]

We visited the Arope company located in Damascus and contacted the Human Resources Manager to allow us to take a look at the internal system of this system.

We noticed the following that their system is an internal system only, meaning that this system does not work with registration via the website.

Also, the system does not allow the customer to obtain his data or any data related to him electronically, but the employee is dealt with directly and face to face to obtain the information that the customer wants.

4.2 BindHQ: [2]

Lightning fast, the agency's modern operating system enables BindHQs, MGAs, MGUs and wholesalers to connect more businesses, expand their profit margins and become more valuable businesses.

BindHQ's constantly improving cloud-based platform reduces total cost of ownership; Nothing needs to be maintained, lower upfront capital expenditures, and once you're live, product upgrades are continuous and automatic.

Pricing:

1. BindHQ Light : Starting at \$275 per month
2. BindHQ Pro Starting at \$375 per month
3. Enterprise: Starting at \$475 per month

4.3 TLDCRM:

It is specifically designed for the insurance sales industry, starting with health and life.

Performs sales or call center operations based on multiple call center workflows and we continue to add key features and amenities to the system weekly. The purpose of a CRM is to help the agency achieve the following goals: sales, communications, retention, commissions, and customer service.

Pricing:

1. Agency :Starting at \$75 per month

5. Comparison of Similar Systems:

Table (1) Comparison of System

المقارنة بين النظام الحالي و أنظمة المشابهة				
	Management System Insurance	Arope Syria System	BindHQ	TLDCRM
Easy to use				
Client has access				
Expensive				
Attractive Interface				

Chapter3

Analytical and Design Study

Introduction: In this section, we will discuss in detail the functional and non-functional requirements and how to achieve them to reach the required goals, taking into account that if an error occurs at this stage, it will lead to the failure of the following stages.

1. **Requirements Document:**

Some references were relied on on the Internet, in addition to benefiting from some previous reports and projects, as their importance was to give a broader and more comprehensive perception of the idea.

Giving perceptions of the non-functional services that the system should provide.

2. **Project Requirements:**

2.1 **Functional Requirements:**

Actor Admin:

1. Add Employee
2. Edit Employee
3. Delete Employee
4. Send Messages to Employee
5. View Database Analysis
6. Add Department
7. Edit Department
8. Delete Department
9. Edit Profile

Actor Customer:

1. Edit Profile
2. Account Statement
3. Electronic Payment
4. View Insurance Details
5. Register a New Insurance

Actor Finance Officer:

1. Edit Profile
2. Payment of Client Dues

Actor Insurance Affairs:

1. Edit Profile
2. Add Insurance
3. Edit Insurance
4. Delete Insurance

Actor Blogger Employee:

1. Edit Profile
2. Add News
3. Edit News
4. Delete News

Actor Customer Affairs :

1. Edit Profile
2. Add Customer
3. Modify Customer Information
4. Delete Customer
5. Check Customer Information

2.2 Non-Functional Requirements:

2.2.1 Usability:

Interfaces between the system and the system manager are user-friendly, clear and easy, helping the user to handle the system well.

2.2.2 Performance:

Performance requirements relate to the quantifiable features of the system such as:

1. Response time: how quickly the system responds to user input.
2. Throughput: The amount of work that the system can accomplish within a specified period of time.
3. Accuracy.

2.2.3 Availability:

The degree to which a system or component is operational and accessible when needed to use it.

2.2.4 Reliability:

The ability of a system or component to perform its functions under the aforementioned conditions for a limited period of time.

2.2.5 Implementation:

Implementation requirements are restrictions on the implementation of the system, including the use of certain tools, programming languages or hardware platforms.

2.2.6 Testing:

We use PHPUnit to find mistakes in their newly committed code quickly and being tested behaves as expected.

2.2.7 Interfaces:

They are limitations imposed by external systems, including legacy systems and forms of exchange.

2.2.8 Security:

- **Digital Signature:** Which a type of cryptography used to simulate the security properties of its digital form, and not the ordinary, the digital has been added to each payment receipt process in which system performs.
- **MD5 Algorithm:** is a cryptographic hash function algorithm that takes the message as input of any length and changes it into a fixed-length message of 16 bytes. We applied it to our project to encrypt some confidential information such as passwords and usernames
- **SQL Injection:** Is a type of an injection attack that makes it possible to execute malicious SQL statements. These statement control a database sever behind web application. we prevent SQL injection attacks in many ways such us input validation and parametrized queries including prepared statements and turn off the visibility of database errors on your production sites and more ways.
- **Generate Password:** we have created a function to generate strong password, then they are encrypted by md5,so it is impossible to decrypt them in any way. It is used when adding a new employee or customer to the system.

3. Analytical Chart of the Project:

3.1 Use-Case Diagram:

Figure(1) Use-Case Diagram

3.2 Use-case Narrative:

3.2.1 Log-In:

Table(2): Use-Case Narrative Log-In

Use-Case Name:	Log-In abstract
Use-Case ID:	MSI-001
Short Description:	The Admin/Customer/Employee logs in with the username and password, and the system will display a message if he can log in or not.
Precondition:	The Guest must have a account.
Postcondition:	The username and password are correct.
Actors:	abstract.
Trigger:	The use case initiated when the customer selects this option from interface.
Standard Process:	1) The customer enters the data into the system. 2) The System will check the data. And the system displays a message to the customer that the login process is successful.
Alternative Processes:	Login Error: 2') The password is incorrect. 3') The customer is redirected to the step1.

3.2.2 Add Employee:

Table(3): Use-Case Narrative Add Employee

Use-Case Name:	Mange Employee (Add Employee)
Use-Case ID:	MSI-002
Short Description:	Add new employee to the system this employee can be : Finance officer or blogger employee or insurance affairs or customer affairs.
Precondition:	Log in and choose Mange employee page.

Postcondition:	This information will be added in DB and display the employee table.
Actors:	Admin.
Trigger:	The use case initiated when the admin selects this option from interface
Standard Process:	1) chooses add new employee. 2) Enter the information of the new employee. 3) Give the employee his username and password. 4) Click Save. 5) The system displays a message confirming the adding process.
Alternative Processes:	Wrong in input value : 5') The system will ask the admin to re-enter the information correctly. 6') The admin is redirected to the step1.

3.2.3 Edit Employee

Table(4): Use-Case Narrative Edit Employee

Use-Case Name:	Mange Employee (Edit Employee)
Use-Case ID:	MSI-003
Short Description:	Modify employee information in the system, such as place of residence or phone number or etc.
Precondition:	Log in and choose Mange employee page.
Postcondition:	This information will be modified in DB d display the employee table.
Actors:	Admin.
Trigger:	The use case initiated when the admin selects this option from interface

Standard Process:	1) Chooses edit employee. 2) Modify the information of the employee. 3) Click Save. 4) The system displays a message confirming the editing process.
Alternative Processes:	Wrong in input value: 4') The system will ask the admin to re-enter the information correctly. 5') The admin is redirected to the step2.

3.2.4 Delete Employee:

Table(5): Use-Case Narrative Delete Employee

Use-Case Name:	Mange Employee (Delete Employee)
Use-Case ID:	MSI-004
Short Description:	Delete employee in the system.
Precondition:	Log in and choose Mange employee page.
Postcondition:	The employee will be deleted from DB .
Actors:	Admin.
Trigger:	The use case initiated when the admin selects this option from interface
Standard Process:	1) Chooses delete employee. 2) Confirm the delete operation. 3) Click Yes. 4) The system displays a message confirming the deleting process.
Alternative Processes:	Click No: 4') The admin is redirected to the step1.

3.2.5 Add Department:

Table(6): Use-Case Narrative Add Department

Use-Case Name:	Mange department (Add department)
Use-Case ID:	MSI-005
Short Description:	Add new department to the system.
Precondition:	Log in and choose Mange department page.
Postcondition:	This information will be added in DB and display the department table.
Actors:	Admin.
Trigger:	The use case initiated when the admin selects this option from interface
Standard Process:	1) chooses add new department . 2) Enter the information of the new department . 3) Click Save. 4) The system displays a message confirming the adding process.
Alternative Processes:	Wrong in input value : 4') The system will ask the admin to re-enter the information correctly. 5') The admin is redirected to the step2.

3.2.6 Edit Department:

Table(7): Use-Case Narrative Edit Department

Use-Case Name:	Mange Department (Edit Department)
Use-Case ID:	MSI-006
Short Description:	Modify Department information in the system, such as Code of the department or etc.
Precondition:	Log in and choose Mange department page.

Postcondition:	This information will be modified in DB display the department table.
Actors:	Admin.
Trigger:	The use case initiated when the admin selects this option from interface
Standard Process:	1) Chooses edit department . 2) Modify the information of the department . 3) Click Save. 4) The system displays a message confirming the editing process.
Alternative Processes:	Wrong in input value: 4') The system will ask the admin to re-enter the information correctly. 5') The admin is redirected to the step2.

3.2.7 Delete Department:

Table(8): Use-Case Narrative Delete Department

Use-Case Name:	Mange Department (Delete Department)
Use-Case ID:	MSI-007
Short Description:	Delete Department in the system.
Precondition:	Log in and choose Mange Department page.
Postcondition:	The Department will be Delete from DB .
Actors:	Admin.
Trigger:	The use case initiated when the admin selects this option from interface
	1) Chooses delete department . 2) Confirm the delete operation. 3) Click Yes.

Standard Process:	4) The system displays a message confirming the deleting process.
Alternative Processes:	Click No: 4') The admin is redirected to the step1.

3.2.8 Edit Profile:

Table(9): Use-Case Narrative Edit Profile

Use-Case Name:	Edit profile
Use-Case ID:	MSI-008
Short Description:	Change the admin password
Precondition:	Log in and choose my profile page.
Postcondition:	The password will be updated in DB .
Actors:	Admin.
Trigger:	The use case initiated when the admin selects this option from interface
Standard Process:	1) Chooses change password. 2) Enter the old password. 3) Enter the new password. 4) Enter the confirm of the new password. 5) Click save. 6) The system displays a message confirming the changing process.
Alternative Processes:	The old password is wrong: 6') The system display message the old password is wrong. 7') The admin is redirected to the step2. Wrong with the new password value:

	6') The system display message the new password is too short or doesn't have a number with small and big letter. 7') The admin is redirected to the step3. The new password doesn't match with the confirm : 6') The system display message the new password is new password doesn't match with the confirm of password. 7') The admin is redirected to the step4.
--	---

3.2.9 Account Statement:

Table(10): Use-Case Narrative Account Statement

Use-Case Name:	Account Statement
Use-Case ID:	MSI-009
Short Description:	The customer can check his financial account with the company, as it shows the payments he made with their details and the amount of his remaining financial account
Precondition:	Log in and choose Account Statement page.
Postcondition:	View all transactions applied to the account on the screen.
Actors:	Customer.
Trigger:	The use case initiated when the admin selects this option from interface
Standard Process:	1) Choosing an Account Statement service. 2) A summary of the client's latest activities appears on the screen.

Alternative Processes:	The customer's unwillingness to disclose his account: 2') Customer Choice Back to Home Page. 3') The system displays the home page of the client.
------------------------	--

3.2.10 Register a New Insurance:

Table(11): Use-Case Narrative Register a New Insurance

Use-Case Name:	Register a new insurance
Use-Case ID:	MSI-010
Short Description:	The customer will added new insurance in his account to use it .
Precondition:	Log in and choose new insurance.
Postcondition:	You have to do the electric payment.
Actors:	Customer.
Trigger:	The use case initiated when the admin selects this option from interface
Standard Process:	1) The system displays all insurance in the company with all details . 2) The customer will choose one of them.. 3) The system displays the electric payment of this insurance .
Alternative Processes:	The customer already have the insurance he is choose: 5') The system shows a message that he had this insurance . 6') The system returns the customer to step2.

3.2.11 Electronic Payment:

Table(12): Use-Case Narrative Electronic Payment

Use-Case Name:	Electronic Payment
Use-Case ID:	MSI-011
Short Description:	The customer pays the insurance bill through his bank account.
Precondition:	Choose an insurance that want to pay for it.
Postcondition:	The insurance will be added to the customer insurances.
Actors:	Customer.
Trigger:	The use case initiated when the admin selects this option from interface
Standard Process:	1) The system displays the Pay screen. 2) The customer chooses the bank he works with. 3) The customer enter his card number. 4) The customer confirms the payment. 5) The system displays a message confirming the payment process.
Alternative Processes:	Wrong card number: 5') The system shows a message that the card number is wrong. 6') The system returns the customer to step3. There is not enough money to complete the payment: 5') The system shows a message that the card can't afford this process. 6') The system returns the customer to step2.

3.2.12 Edit Profile:

Table(13): Use-Case Narrative Edit Profile

Use-Case Name:	Edit profile
Use-Case ID:	MSI-012
Short Description:	Change the Customer password
Precondition:	Log in and choose my profile page.
Postcondition:	The password will be updated in DB .
Actors:	Customer.
Trigger:	The use case initiated when the admin selects this option from interface
Standard Process:	1) Chooses change password. 2) Enter the old password. 3) Enter the new password. 4) Enter the confirm of the new password. 5) Click save. 6) The system displays a message confirming the changing process.
Alternative Processes:	The old password is wrong: 6') The system display message the old password is wrong. 7') The Customer is redirected to the step2. Wrong with the new password value: 6') The system display message the new password is too short or doesn't have a number with small and big letter. 7') The Customer is redirected to the step3.

	The new password doesn't match with the confirm : 6') The system display message the new password is new password doesn't match with the confirm of password. 7') The Customer is redirected to the step4.
--	---

3.2.13 Add Customer:

Table(14): Use-Case Narrative Add Customer

Use-Case Name:	Mange Customer (Add Customer)
Use-Case ID:	MSI-013
Short Description:	Add new customer to the system.
Precondition:	Log in and choose Mange customer page.
Postcondition:	This information will be added in DB and display the customer table.
Actors:	Customer affairs.
Trigger:	The use case initiated when the customer affairs selects this option from interface
Standard Process:	1) chooses add new customer . 2) Enter the information of the new customer . 3) Give the customer his username and password. 4) Click Save. 5) The system displays a message confirming the adding process.
Alternative Processes:	Wrong in input value : 5') The system will ask the customer affairs to re-enter the information correctly. 6') The customer affairs is redirected to the step1.

3.2.14 Edit Customer:

Table(15): Use-Case Narrative Edit Customer

Use-Case Name:	Mange Customer (Edit Customer)
Use-Case ID:	MSI-014
Short Description:	Modify customer information in the system, such as place of living or phone number or etc.
Precondition:	Log in and choose Mange customer page.
Postcondition:	This information will be modified in DB d display the customer table.
Actors:	Customer affairs.
Trigger:	The use case initiated when the customer affairs selects this option from interface
Standard Process:	1) Chooses edit customer. 2) Modify the information of the customer. 3) Click Save. 4) The system displays a message confirming the editing process.
Alternative Processes:	Wrong in input value: 4') The system will ask the customer affairs to re-enter the information correctly. 5') The customer affairs is redirected to the step2.

3.2.15 Delete Customer:

Table(16): Use-Case Narrative Delete Customer

Use-Case Name:	Mange Customer (Delete Customer)
Use-Case ID:	MSI-015
Short Description:	Delete customer in the system.
Precondition:	Log in and choose Mange customer page.
Postcondition:	The customer will be Delete from DB .

Actors:	Customer affairs.
Trigger:	The use case initiated when the customer affairs selects this option from interface
Standard Process:	1) Chooses delete customer. 2) Confirm the delete operation. 3) Click Yes. 4) The system displays a message confirming the deleting process.
Alternative Processes:	Click No: 4') The customer affairs is redirected to the step1.

3.2.16 Check Customer Information:

Table(17): Use-Case Narrative Check Customer Information

Use-Case Name:	Check customer information
Use-Case ID:	MSI-016
Short Description:	The customer affairs employee will verify the information of the new customers who registered for the first time, he will verify the photo ID entered and other information, and on the basis of this, approval or rejection will be made.
Precondition:	Log in and choose check customer information.
Postcondition:	Added new customer to the system.
Actors:	Customer affairs.
Trigger:	The use case initiated when the admin selects this option from interface
	1) The system displays all the new request . 2) The customer affairs employee will choose one of them.

Standard Process:	3) The system displays the ID photo and information of this request. 4) The customer affairs employee make sure that the information is correct and call the applicant of this request. 5) The customer affairs employee approved the request. 6) The system sent an email to applicant of the request , tell him that his request been approved and he can sign in. 7) The system will added to the customer table. 8) The system displays a message confirming the process. 9) The customer affairs employee call the applicant that his been approved.
Alternative Processes:	The customer affairs employee rejected the request : 5') The system will delete the request. 6') The system returns the customer affairs to step2.

3.2.17 Edit Profile:

Table(18): Use-Case Narrative Edit Profile

Use-Case Name:	Edit profile
Use-Case ID:	MSI-017
Short Description:	Change the Customer Affairs password
Precondition:	Log in and choose my profile page.
Postcondition:	The password will be updated in DB .
Actors:	Customer Affairs
Trigger:	The use case initiated when the admin selects this option from interface

Standard Process:	1) Chooses change password. 2) Enter the old password. 3) Enter the new password. 4) Enter the confirm of the new password. 5) Click save. 6) The system displays a message confirming the changing process.
Alternative Processes:	The old password is wrong: 6') The system display message the old password is wrong. 7') The admin is redirected to the step2. Wrong with the new password value: 6') The system display message the new password is too short or doesn't have a number with small and big letter. 7') The Customer Affairs is redirected to the step3. The new password doesn't match with the confirm : 6') The system display message the new password is new password doesn't match with the confirm of password. 7') The Customer Affairs is redirected to the step4.

3.2.18 Add Insurance:

Table(19): Use-Case Narrative Add Insurance

Use-Case Name:	Mange Insurance (Add Insurance)
Use-Case ID:	MSI-018
Short Description:	Add new Insurance to the system.
Precondition:	Log in and choose Mange Insurance page.

Postcondition:	This information will be added in DB and display the Insurance table.
Actors:	Insurance Affairs.
Trigger:	The use case initiated when the admin selects this option from interface
Standard Process:	1) chooses add new Insurance . 2) Enter the information of the new Insurance . 3) Click Save. 4) The system displays a message confirming the adding process.
Alternative Processes:	Wrong in input value : 4') The system will ask the Insurance Affairs to re-enter the information correctly. 5') The Insurance Affairs is redirected to the step2.

3.2.19 Edit Insurance:

Table(20): Use-Case Narrative Edit Insurance

Use-Case Name:	Mange insurance (Edit insurance)
Use-Case ID	MSI-019
Short Description:	Modify insurance information in the system, such as Price.
Precondition:	Log in and choose Mange department page.
Postcondition:	This information will be modified in DB display the department table.
Actors:	Insurance Affairs.
Trigger:	The use case initiated when the Insurance Affairs selects this option from interface
	1) Chooses edit Insurance . 2) Modify the information of the Insurance . 3) Click Save.

Standard Process:	4) The system displays a message confirming the editing process.
Alternative Processes:	Wrong in input value: 4') The system will ask the Insurance Affairs to re-enter the information correctly. 5') The Insurance Affairs is redirected to the step2.

3.2.20 Delete Insurance:

Table(21): Use-Case Narrative Delete Insurance

Use-Case Name:	Mange insurance (Remove insurance)
Use-Case ID:	MSI-020
Short Description:	Remove insurance in the system.
Precondition:	Log in and choose Mange insurance page.
Postcondition:	The insurance will be removed from DB .
Actors:	insurance affairs.
Trigger:	The use case initiated when the insurance affairs selects this option from interface
Standard Process:	1) Chooses remove insurance . 2) Confirm the remove operation. 3) Click Yes. 4) The system displays a message confirming the removing process.
Alternative Processes:	Click No: 4') The insurance affairs is redirected to the step1.

3.2.21 Edit Profile:

Table(22): Use-Case Narrative Edit Profile

Use-Case Name:	Edit profile
Use-Case ID:	MSI-021
Short Description:	Change the Insurance Affairs password
Precondition:	Log in and choose my profile page.
Postcondition:	The password will be updated in DB .
Actors:	Insurance Affairs.
Trigger:	The use case initiated when the admin selects this option from interface
Standard Process:	1) Chooses change password. 2) Enter the old password. 3) Enter the new password. 4) Enter the confirm of the new password. 5) Click save. 6) The system displays a message confirming the changing process.
Alternative Processes:	The old password is wrong: 6') The system display message the old password is wrong. 7') The insurance affairs is redirected to the step2. Wrong with the new password value: 6') The system display message the new password is too short or doesn't have a number with small and big letter. 7') The insurance affairs is redirected to the step3.

	The new password doesn't match with the confirm : 6') The system display message the new password is new password doesn't match with the confirm of password. 7') The insurance affairs is redirected to the step4.
--	--

3.2.22 Payment of client insurance:

Table(23): Use-Case Narrative Payment of client insurance

Use-Case Name:	Payment of client insurance .
Use-Case ID:	MSI-022
Short Description:	The customer will do the insurance and payment directly in the company by the finance officer employee.
Precondition:	Log in and choose customer insurance.
Postcondition:	The customer have a account in the system.
Actors:	Finance officer.
Trigger:	The use case initiated when the admin selects this option from interface
Standard Process:	1) The finance office employee will look for the customer. 2) Choose the insurance at the request of the client. 3) The system displays the payment bill of this insurance. 4) The finance office employee will confirm that the customer pay for him. 5) The system added the pay to his account. 6) The system displays the receipt of this pill.

	7) The finance office employee print the receipt and give it to the customer.
Alternative Processes:	The customer already have the insurance he is choose: 3') The system shows a message that he had this insurance . 4') The system returns the customer to step2.

3.2.23 Edit Profile:

Table(24): Use-Case Narrative Edit Profile

Use-Case Name:	Edit profile
Use-Case ID:	MSI-023
Short Description:	Change the Finance officer password
Precondition:	Log in and choose my profile page.
Postcondition:	The password will be updated in DB .
Actors:	Finance officer
Trigger:	The use case initiated when the admin selects this option from interface
Standard Process:	1) Chooses change password. 2) Enter the old password. 3) Enter the new password. 4) Enter the confirm of the new password. 5) Click save. 6) The system displays a message confirming the changing process.
Alternative Processes:	The old password is wrong: 6') The system display message the old password is wrong. 7') The Finance officer is redirected to the step2. Wrong with the new password value:

	6') The system display message the new password is too short or doesn't have a number with small and big letter. 7') The Finance officer is redirected to the step3. The new password doesn't match with the confirm : 6') The system display message the new password is new password doesn't match with the confirm of password. 7') The Finance officer is redirected to the step4.
--	---

3.2.24 Edit Profile:

Table(25): Use-Case Narrative Edit Profile

Use-Case Name:	Edit profile
Use-Case ID:	MSI-024
Short Description:	Change the Blogger Employee password
Precondition:	Log in and choose my profile page.
Postcondition:	The password will be updated in DB .
Actors:	Blogger Employee
Trigger:	The use case initiated when the admin selects this option from interface
Standard Process:	1) Chooses change password. 2) Enter the old password. 3) Enter the new password. 4) Enter the confirm of the new password. 5) Click save. 6) The system displays a message confirming the changing process.

Alternative Processes:	The old password is wrong: 6') The system display message the old password is wrong. 7') The Blogger Employee is redirected to the step2. Wrong with the new password value: 6') The system display message the new password is too short or doesn't have a number with small and big letter. 7') The Blogger Employee is redirected to the step3. The new password doesn't match with the confirm : 6') The system display message the new password is new password doesn't match with the confirm of password. 7') The Blogger Employee is redirected to the step4.
------------------------	--

3.2.25 Add Blog:

Table(26): Use-Case Narrative Add Blog

Use-Case Name:	Mange News (Add News)
Use-Case ID:	MSI-025
Short Description:	Add new news or blog to the blog page.
Precondition:	Log in and choose mange news page.
Postcondition:	Added new blogs so everyone can see it .
Actors:	Blogger Employee
Trigger:	The use case initiated when the admin selects this option from interface
Standard Process:	1) chooses add new blog . 2) Enter the information of the new blog. 3) Click Save. 4) The system displays a message confirming the adding process.

Alternative Processes:	Wrong in input value : 4') The system will ask the admin to re-enter the information correctly. 5') The admin is redirected to the step2.
------------------------	---

3.2.26 Edit Blog:

Table(27): Use-Case Narrative Edit Blog

Use-Case Name:	Mange News (Edit News)
Use-Case ID:	MSI-026
Short Description:	Modify News information in the system, such as description of the department or etc.
Precondition:	Log in and choose Mange department page.
Postcondition:	This information will be modified in DB display the department table.
Actors:	Blogger Employee.
Trigger:	The use case initiated when the admin selects this option from interface
Standard Process:	1) Chooses edit News . 2) Modify the information of the news . 3) Click Save. 4) The system displays a message confirming the editing process.
Alternative Processes:	Wrong in input value: 4') The system will ask the Blogger Employee to re-enter the information correctly. 5') The Blogger Employee is redirected to the step2.

3.2.27 Delete Blog:

Table(28): Use-Case Narrative Delete Blog

Use-Case Name:	Mange News (Remove news)
Use-Case ID:	MSI-027
Short Description:	Remove news from blogs page.
Precondition:	Log in and choose Mange news page.
Postcondition:	The blog will be removed from DB .
Actors:	Blogger Employee.
Trigger:	The use case initiated when the admin selects this option from interface
Standard Process:	1) Chooses remove blog . 2) Confirm the remove operation. 3) Click Yes. 4) The system displays a message confirming the removing process.
Alternative Processes:	Click No: 4') The admin is redirected to the step1.

3.2.28 View Insurance Details:

Table(29): Use-Case Narrative View Insurance Details

Use-Case Name:	View Insurance Details
Use-Case ID:	MSI-028
Short Description:	View the insurance of data that the client have like covers insurance.
Precondition:	Log in and choose View Insurance Details page.

Postcondition:	View all insurance details applied on the screen.
Actors:	Customer.
Trigger:	The use case initiated when the admin selects this option from interface
Standard Process:	1) Choosing view Insurance details. 2) Choose one of the insurance . 3) Appears on the screen the insurance details.
Alternative Processes:	Customer don't have insurance : 2') Appears on the screen that customer don't have insurances

3.2.29 View Data Analysis:

Table(30): Use-Case Narrative View Data Analysis

Use-Case Name:	View data analysis
Use-Case ID:	MSI-029
Short Description:	View the analysis of data in the form of schemes graphs like profit year and how much client sign up
Precondition:	Log in and choose View Data Analysis page.
Postcondition:	View all data analysis applied on the screen.
Actors:	Admin.
Trigger:	The use case initiated when the admin selects this option from interface
Standard Process:	1) Choosing view data analysis. 2) The System show admin the data analysis.

Chapter4

Implementation of Project

1. **Home-Page:**

On this page, the visitor can see the existing services, advertisements, policy, and about the site, and he can also go to log-in in to the site.

2. **Services:**

On this page, the visitor display the insurances offered by our website.

3. **Log-In:**

On this page, the Admin, Customer, Employee enters his user's name and password, and then the site verifies the entered user name and password, and if they are correct, then it will move it to the main interface, but if the user's name or password is wrong, then it will show a message that there is no one with this information entered.

4. **(Admin) Dashboard:**

On this page, the site displays all the information about the system, which include Organization, Employee, Add employee, edit employee, delete employee, profile, data analysis and from any of them he can show details.

5. **(Admin) Organization:**

On this page, the admin manages the sections of the operations of deleting, adding and modifying.

6. **(Admin) Employee:**

On this page, the admin manages the employee of the operations of deleting, adding and modifying, here we will show an example of the employee addition interface, through which the admin can add an employee to the site.

7. **(Admin) Profile:**

On this page, the site shows the Admin information, he can modify it.

8. **(Customer) Dashboard:**

On this page, the Customer manages the customer of the operations of deleting, adding and modifying.

Chapter5

Conclusion and Next Stages

Conclusion:

Nowadays, technology dominates human life. With software and technical hardware, exceptions are reduced and even terminated. People also prefer an easy, fast and safe method for every part of their life. This project is designed to meet the requirements of the Internet electronic insurance. In our project: with this Management of Insurance; Firms can satisfy their customers' comfortable facilities. With this site we've built, we hope to reduce wasted time, avoid misunderstandings, provide easy data flow, customer satisfaction, and less hassle work. We believe we have achieved our goals in this project.

In the Senior Project 2:

1. Limit the Number of Times to Log-In.
2. Develop the shape of the system interfaces, which makes the system more efficient and effective.
3. Make the site support Arabic.
4. Develop a system for participants.
5. Application development on Android devices.
